Step 2 – Access and log in to Power Club

Open Power Club via iSolarCloud:

- In the iSolarCloud menu, click the **“More Applications”** icon.
- Select **Sungrow Power Club**.

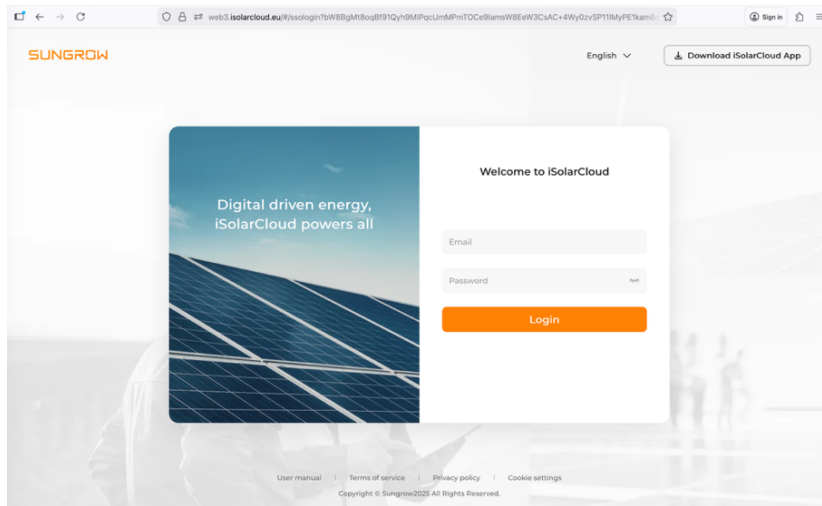

- You will be redirected to the [iSolarCloud SSO login page](#).

Log in using Single Sign-On (SSO):

- Use your existing **iSolarCloud credentials** to log in.
- No separate account is needed — **SSO** automatically gives you access to Power Club.

First-time registration:

- Complete the short registration form — required only for first-time Power Club users.
- Note: The 'Chosen Locale' field only shows the languages we've activated, independent of the country field.

Access to Power Club dashboard:

- After submitting the form, you'll be directed to your localized Power Club homepage if available, or the default **New User** page until your local version is ready.
- You can start exploring the platform and earn points immediately.
- Full features will unlock as you progress and once your local version becomes available.
